

Product 242. Curved Recessed Fixed Downlight

*Low void option available to give a unit height of 91mm.

ø 82mm cut out.

Sparkle

Looking for the intense sparkle produced by a multi-point light source combined into a single, brilliant beam? Then look no further.

Our patented mixing chamber pairs a metalised reflector with a prismatic glass lens to mimic the stunning effect achieved with halogen dichroic. We are not aware of any other product in the market which achieves this, making our products well-known for their sparkle.

Colour consistency

Our colour temperature consistency is guaranteed to be less than a young human eye can differentiate. At 1.5 MacAdam ellipse our consistency is the best available in the market – including remote phosphor products.

Fire-rating

All the products are available with an independent 60 minute fire-rating.

IP-rating

All products are IP44 minimum. All fixed baffle products are available with IP65 rating.

Bespoke bezels and finishes

As a UK manufacturing business, bespoke products and finishes are available. For example, whilst all products come with a light textured white powder-coat paint as standard, any bezel or baffle is available in any RAL. Most products are also available in brushed and polished chrome as well as anodised finishes depending on bezel material.

Low void installations

A low-void heatsink option is available – please see dimension drawing for clearance measurements.

The Curve Recessed Fixed 96mm has a short black textured baffle then the aperture opens up through a white textured powder-coated bezel. This product is part of the Curve family which, when dimmed, the curve of the bezel gives a gentle glow which appears to “grow” as the light output is then increased. This effect is achieved through a combination of the curve having a constant radius, together with textured paint and In order to keep the fitting discrete, we have put great care into making the outer rim of the bezel as thin as possible – 1.4mm before paint.
